

BREAK ROOM

THE PLAYER'S MANUAL

Fifteen games inside a single JSFX, for when the mix needs you to walk away from it.

BY CHMAHA / FOR REAPER

WELCOME

Step away from the mix.

Your ears are tired. Your snare has been wrong for an hour. Break Room puts fifteen games one click away, on any track, without touching your audio. Five are **Zen** pieces with no way to lose. Ten are proper **Games**, from peg-bouncing to poker to running a racing stable. Every one of them is drawn, animated and played entirely inside a JSFX.

ZEN

Koi Pond 6

Pixel Garden 7

Firefly Shepherd 8

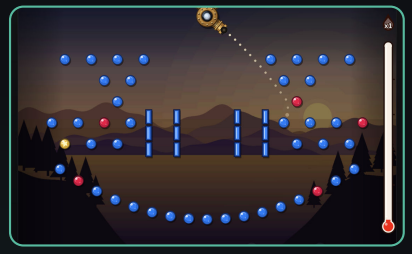

Rain Window 9

Kintsugi 10

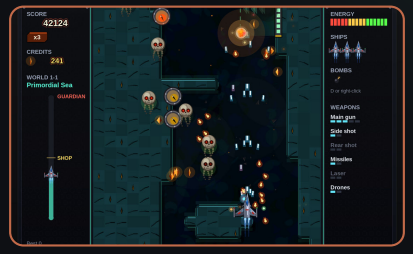

GAMES

Peggy 12

Bubble and Squeak 14

Krypton Gigablast 15

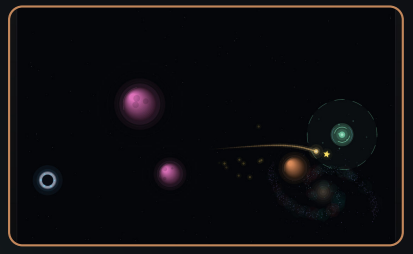

Hold Your Horses 17

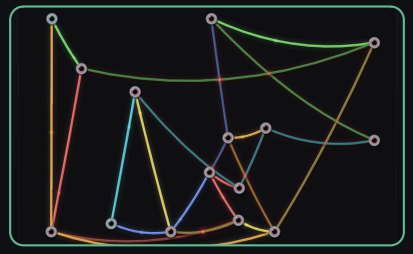

Hop to It 20

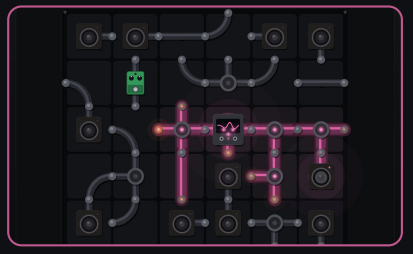

Flop House 22

Slingshot 24

Patch Bay 25

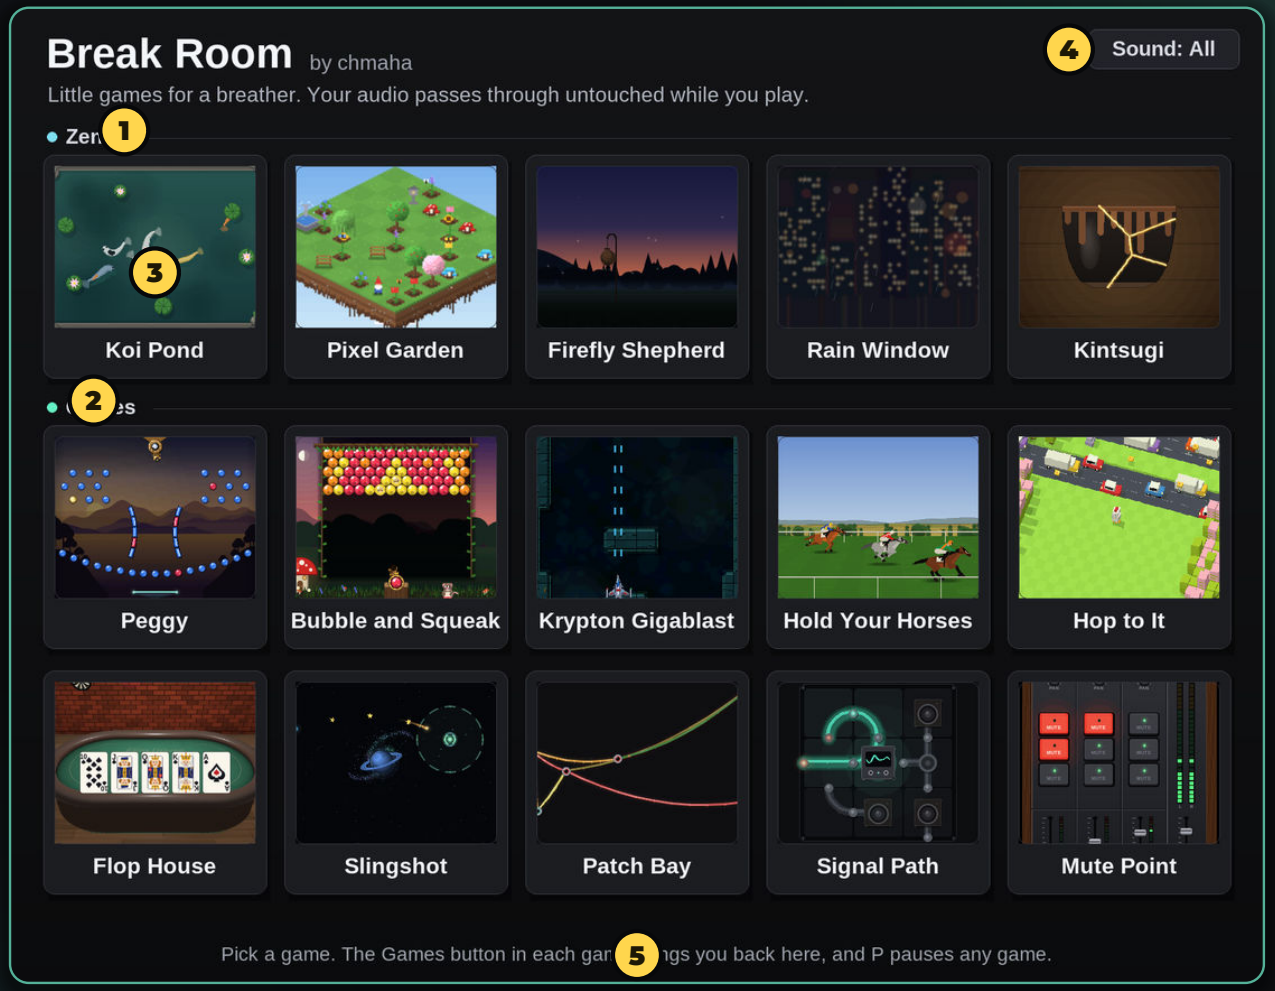

Signal Path 26

Mute Point 27

GETTING STARTED

Open the door.

Your audio is safe

Audio passes straight through untouched. Game sound only plays while the transport is stopped or paused, so it can never end up in a render.

If you install by hand

Keep the **Dependencies/BreakRoom** folder next to **BreakRoom.jsfx**. It holds the game code and the music.

THE HOME SCREEN

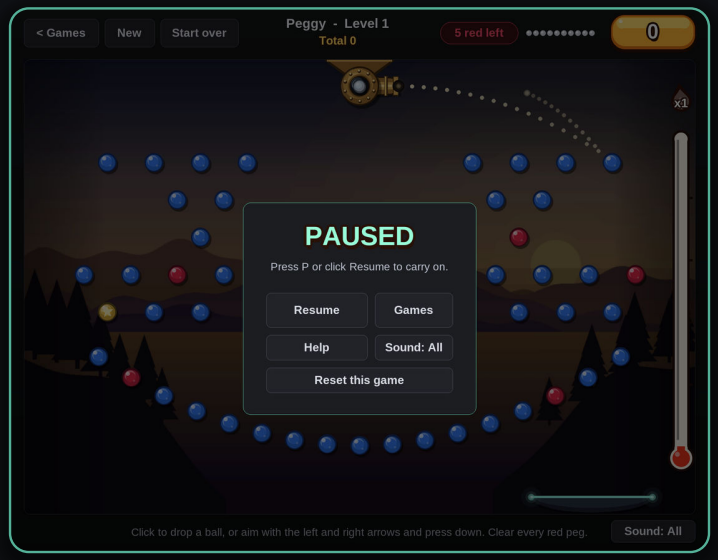

1. **Zen**
   Five calm pieces with no score to chase and no way to fail.
2. **Games**
   Ten games with levels, scores and bragging rights.
3. **Click a card**
   Each card is a live preview. Click it to play.
4. **Sound**
   Cycles **All**, **FX** and **Off** for the whole plugin.
5. **The hint line**
   A reminder of what to do, on the home screen and inside each game.

SETTING UP

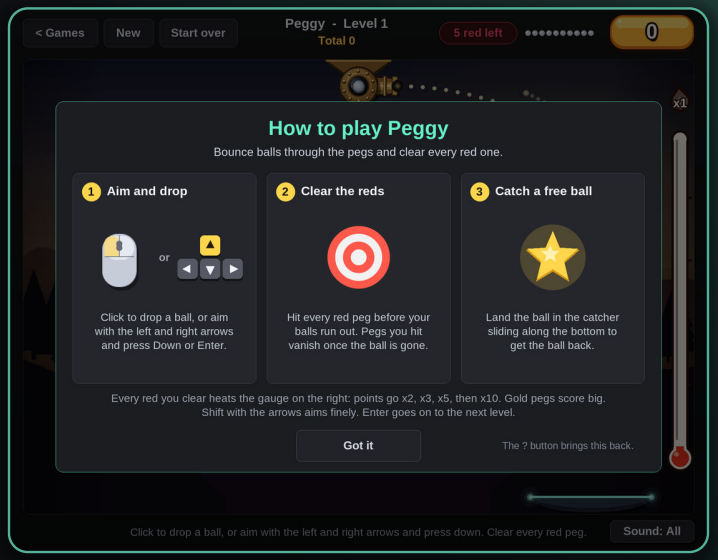

Add **Break Room** to any track as a JSFX, then open its window. Drag the window edge to resize it and everything scales with it. Progress is saved with your REAPER project, so **save the project** to keep it.

IN EVERY GAME

The controls that work everywhere.

The pause panel

The help card appears the first time you open each game

ANYWHERE

P	Pause and carry on. The music pauses too.
< Games	Back to the home screen.
?	Bring back the how-to-play card.
Sound: All	Cycle **All**, **FX** only or **Off**.
Enter	Closes help cards and moves on in the keyboard games.

ON MANY GAMES

New	A fresh board at the same level.
Start over	Back to level 1. Click again on **Sure?** to confirm.

Reset this game

On the pause panel. It returns just that game to how it was the first time you opened it and leaves the others alone. Click once more to confirm.

Keep REAPER happy

Esc closes the JSFX window and **Space** still starts the transport, so no game uses them.

When it stops

Press play, close the window or leave a game and its music fades away. Come back and it picks up again.

Saved with your project

Levels, scores, your garden and your racing stable are all stored with the REAPER project.

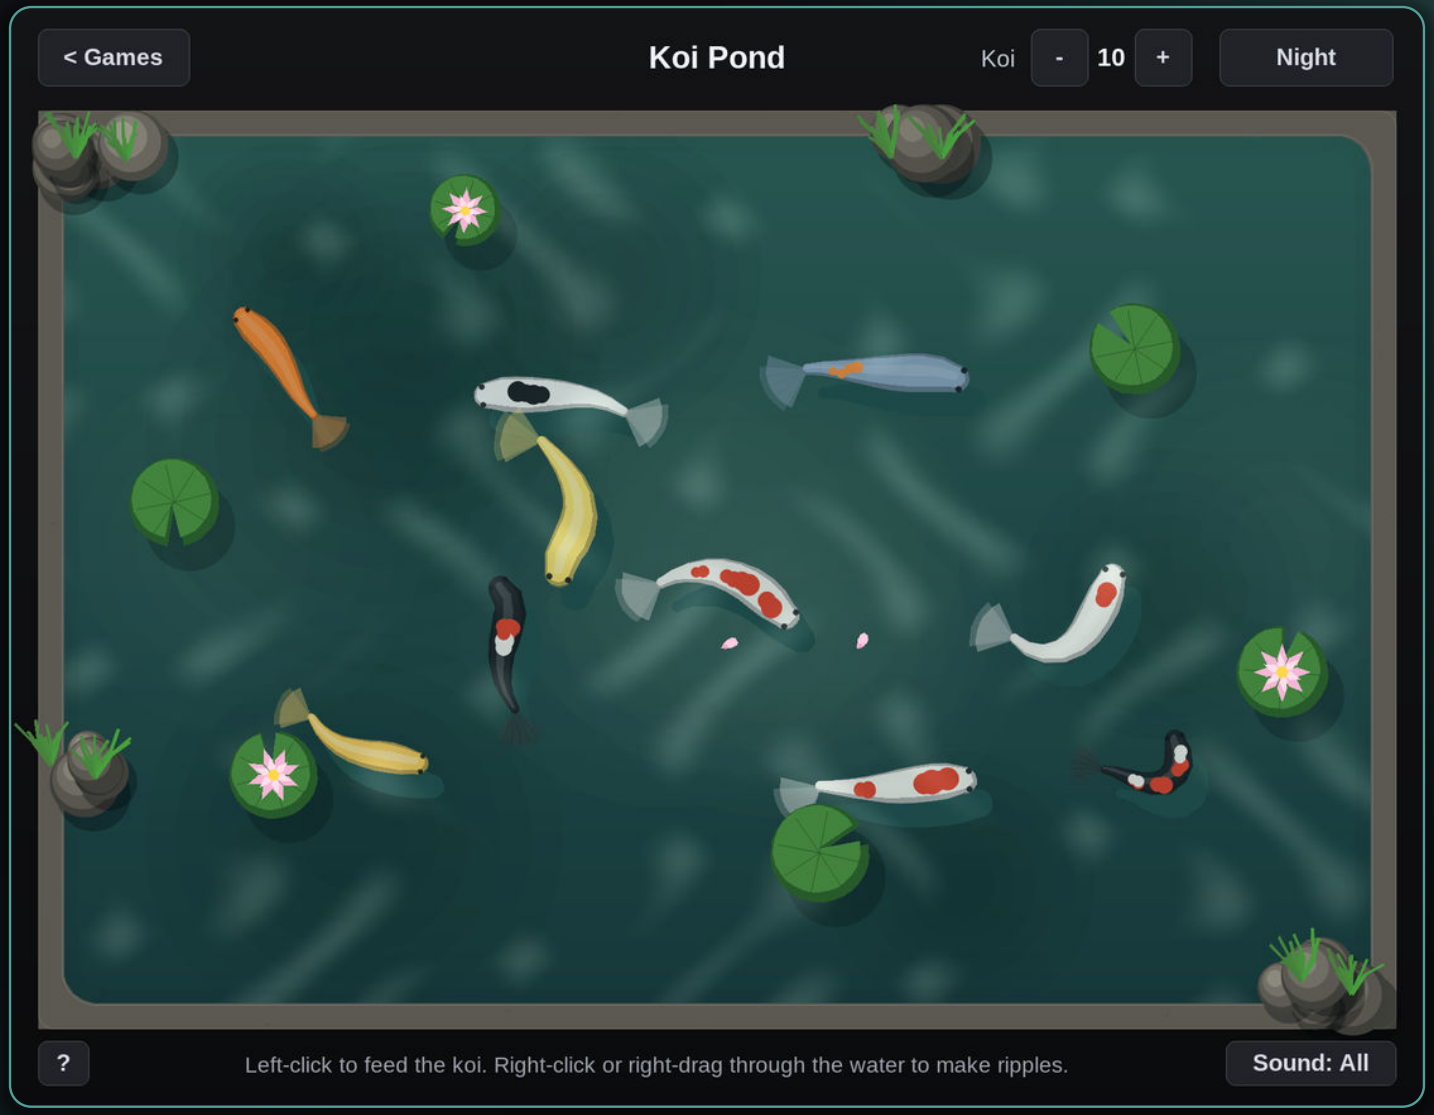

Mouse first

Every game can be played with the mouse alone. Some add keyboard controls for those who prefer them.

Sound, your way

All plays music and effects, **FX** drops the music, **Off** silences everything. One button, for the whole plugin.

Firefly Shepherd - Night 3
Lead the fireflies with your light and hold the button to call them closer. Hover over a lantern to
ZEN
No clock. No fail states. Nothing to prove. Five quiet places to rest your ears and your head.
Sound: All
?
Drag each shard to where it belongs. Close is close enough: it settles in and the crack fills with gold.

ZEN / 1 OF 5

Koi Pond

Feed the koi and watch them glide. There is nothing to win.

Eight varieties of koi drift between lily pads and lotus flowers while blossom falls on the water. Every ripple is simulated, every fish turns with a living spine. It is the most relaxing thing you can do between takes.

CONTROLS

- Drop a pellet. The nearest koi come to eat it.
- Right-click or right-drag through the water to send out ripples.
- `-` `+` Choose how many koi swim, from 1 to 12.
- `Night` Switch between day and night.

Lay a trail

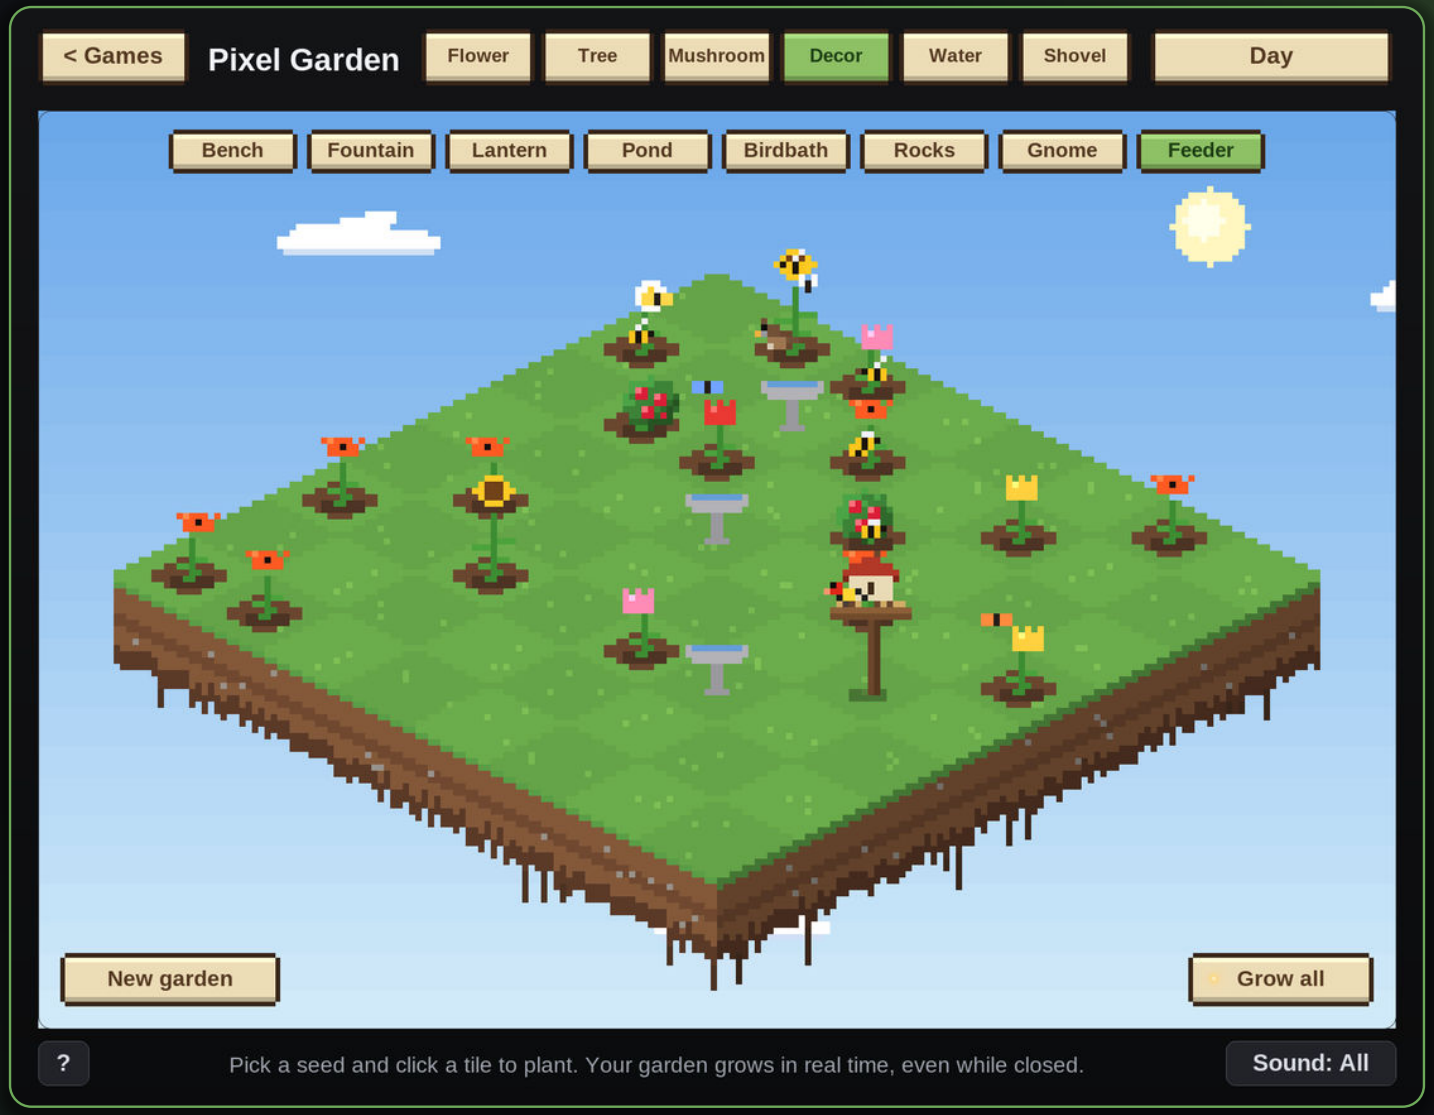

Koi lose interest in a pellet after a few seconds, so a line of food leads them on a slow tour of the pond.

Stay for the moon

After dark the moon floats on the surface and breaks apart with every ripple you make.

It remembers

Your koi count and the time of day come back with the project, ready when you are.

ZEN / 2 OF 5

Pixel Garden

A floating island that keeps growing, even while the window is closed.

Plant from the tool strip and check back later. Nothing ever wilts. Flowers bloom first, mushrooms follow and trees take their time. Bees find your blooms, butterflies wander through and rain arrives now and then to water everything for you.

CONTROLS

Flower Tree	Also **Mushroom**. Pick a type, then click a tile to plant a random variety.
Decor	Place a bench, fountain, lantern, pond, birdbath, rocks, gnome or bird feeder.
Water	Click a plant to double its growth speed for 3 minutes.
Shovel	Dig up whatever is on a tile.
Day	Cycle the sky: day, sunset, night.
Grow all	Skip ahead and see the finished garden.
New garden	Clear the island. Asks you to confirm.

Hover over anything

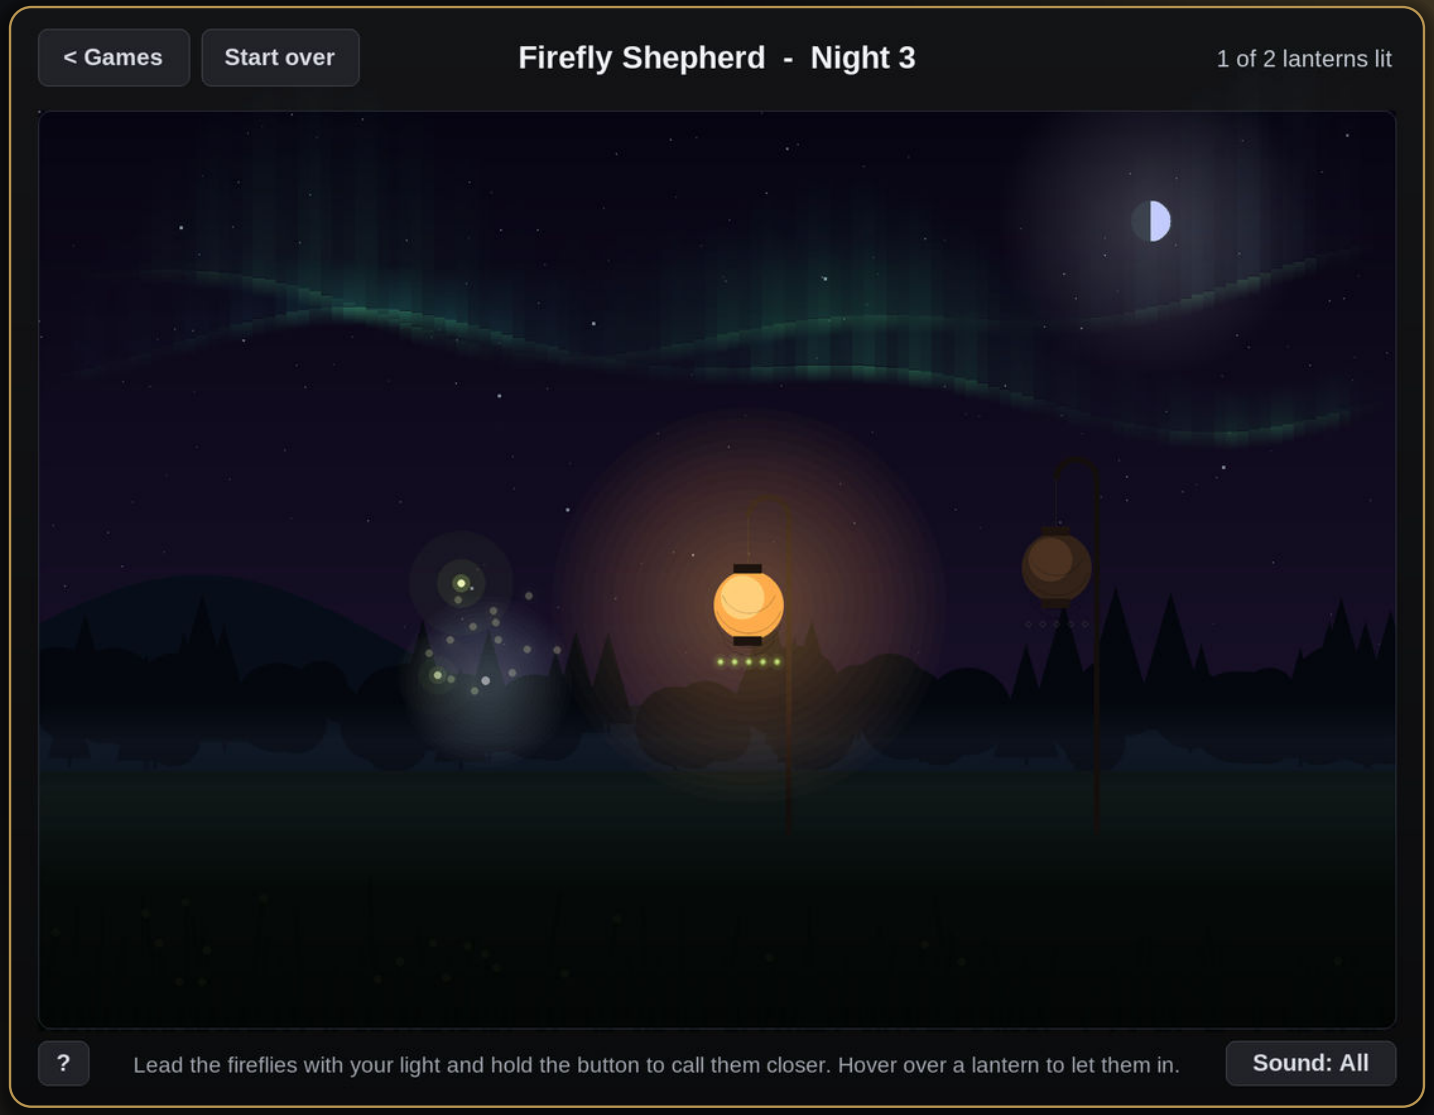

Point at a plant or visitor to see what it is and how long it has left to grow.

Feed the birds

Feeders and birdbaths bring robins, blue tits, goldfinches, cardinals and sparrows. An owl may visit at night.

Come back tomorrow

Growth follows real time, so a garden planted today will have moved on next time you open the project.

ZEN / 3 OF 5

Firefly Shepherd

Lead the fireflies home and light every lantern.

Each night has its own sky, from orange dusk to deep midnight. The moon waxes and wanes, shooting stars cross now and then, and the darkest nights can bring the northern lights or the Milky Way. Fill the paper lanterns and watch them float away.

CONTROLS

Your light follows the mouse. The fireflies follow your light, lazily.

Hold the button to call them in tight. Let go and they spread out again.

Hover your light over a lantern to let the swarm in.

Start over

Return to the first night. Asks you to confirm.

Slow down

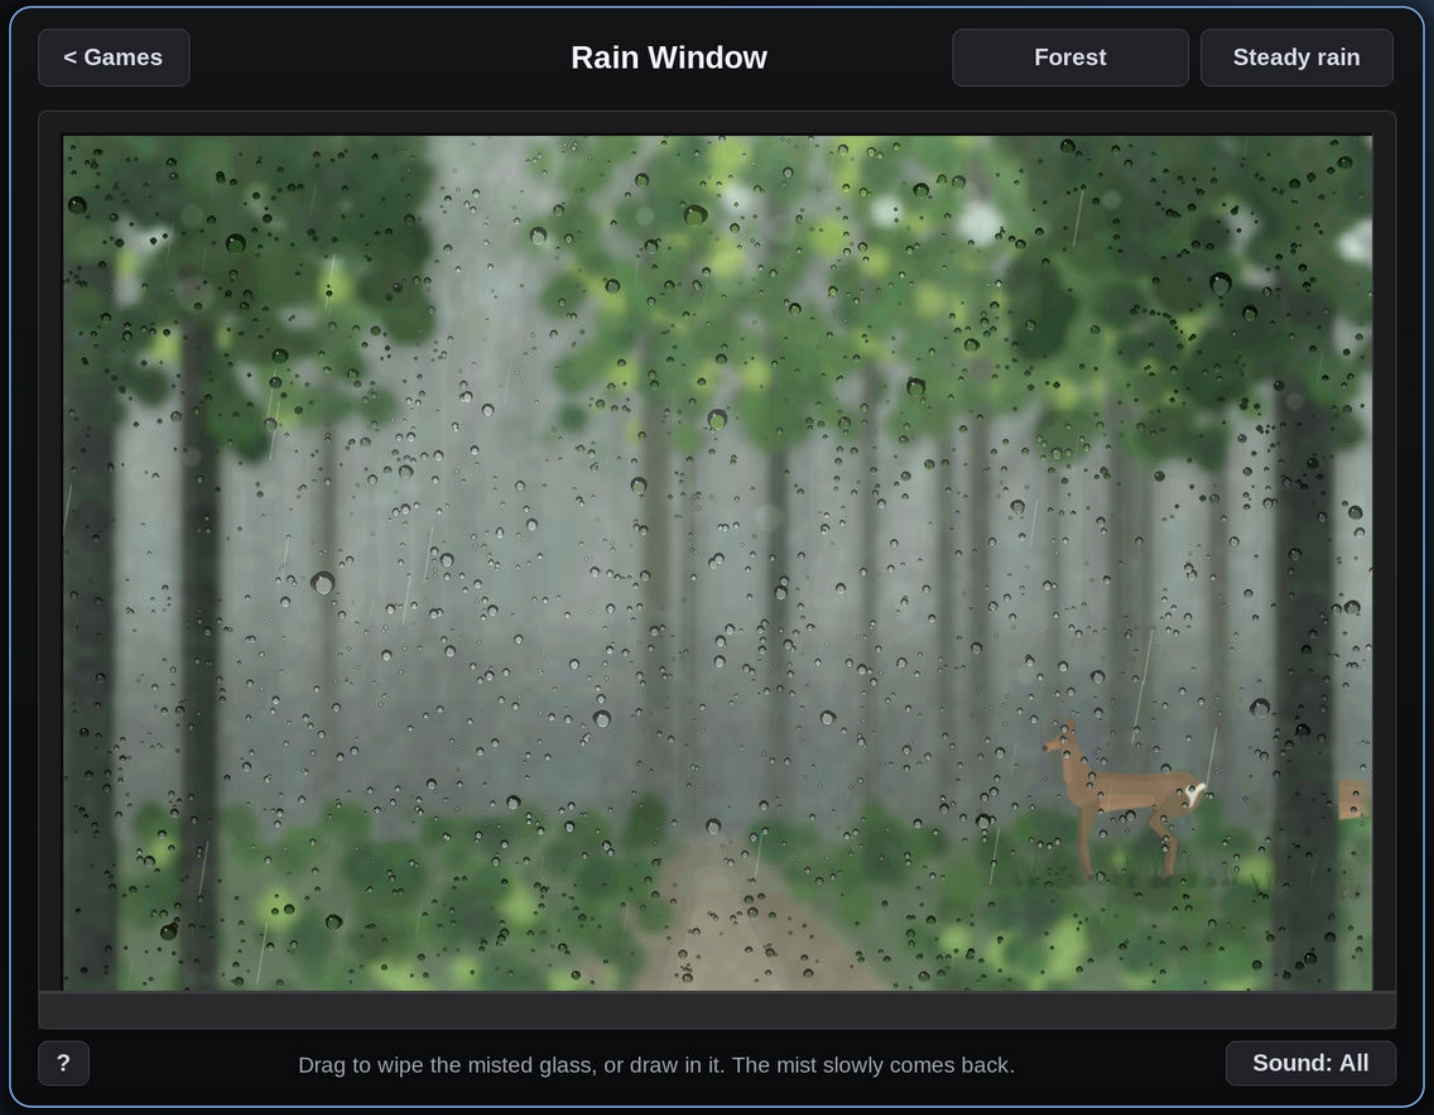

They are fireflies, not sheepdogs. Rush and the swarm scatters behind you. Drift and it comes along.

Watch them leave

The next night only begins once the last lantern has left the sky. That is the point.

More every night

Each new night hangs more lanterns, and every lantern needs its share of fireflies.

ZEN / 4 OF 5

Rain Window

Watch the rain run down the glass. There is nothing to win.

Drops bead, gather their neighbours and suddenly run, each one a tiny inverted lens on the world outside. Behind the glass lies a city at night, a city at dusk, or a misty forest with its own quiet life.

CONTROLS

Drag across the glass to wipe away the mist, or draw in it. It slowly creeps back.

City at night — Change the view: city at night, city at dusk or forest.

Steady rain — Set the rain: light, steady or heavy.

Keep an eye out

In the forest, deer, rabbits, birds and the occasional hiker come and go. Someone usually appears soon after you arrive.

Leave a message

The mist takes a while to return, so whatever you write stays for a moment before the glass fogs over.

Turn it up

Heavy rain changes everything: more drops, more runners, and more mist drawn back across the pane.

ZEN / 5 OF 5

Kintsugi

Mend broken pottery with gold, one piece at a time.

A vessel waits in pieces on a walnut table. Carry each shard home and the crack fills with shimmering gold. Five glazes to repair, from raku tea bowl to moon jar, each new piece breaking into more shards than the last. No clock and no score.

CONTROLS

	Pick up a shard and carry it to where it belongs.
New	Break a fresh vessel.
Start over	Return to the first piece. Asks you to confirm.

Close is close enough

Drop a shard near its place and it settles in by itself, turning to fit.

Work from the edges

The outline of the vessel is your best guide. Rim pieces are the easiest to read.

Admire the work

The break becomes part of the story. Every finished piece is more beautiful for it.

GAMES

High scores. Heartbreak. A thrash metal soundtrack. Ten reasons to say you will be back in five minutes.

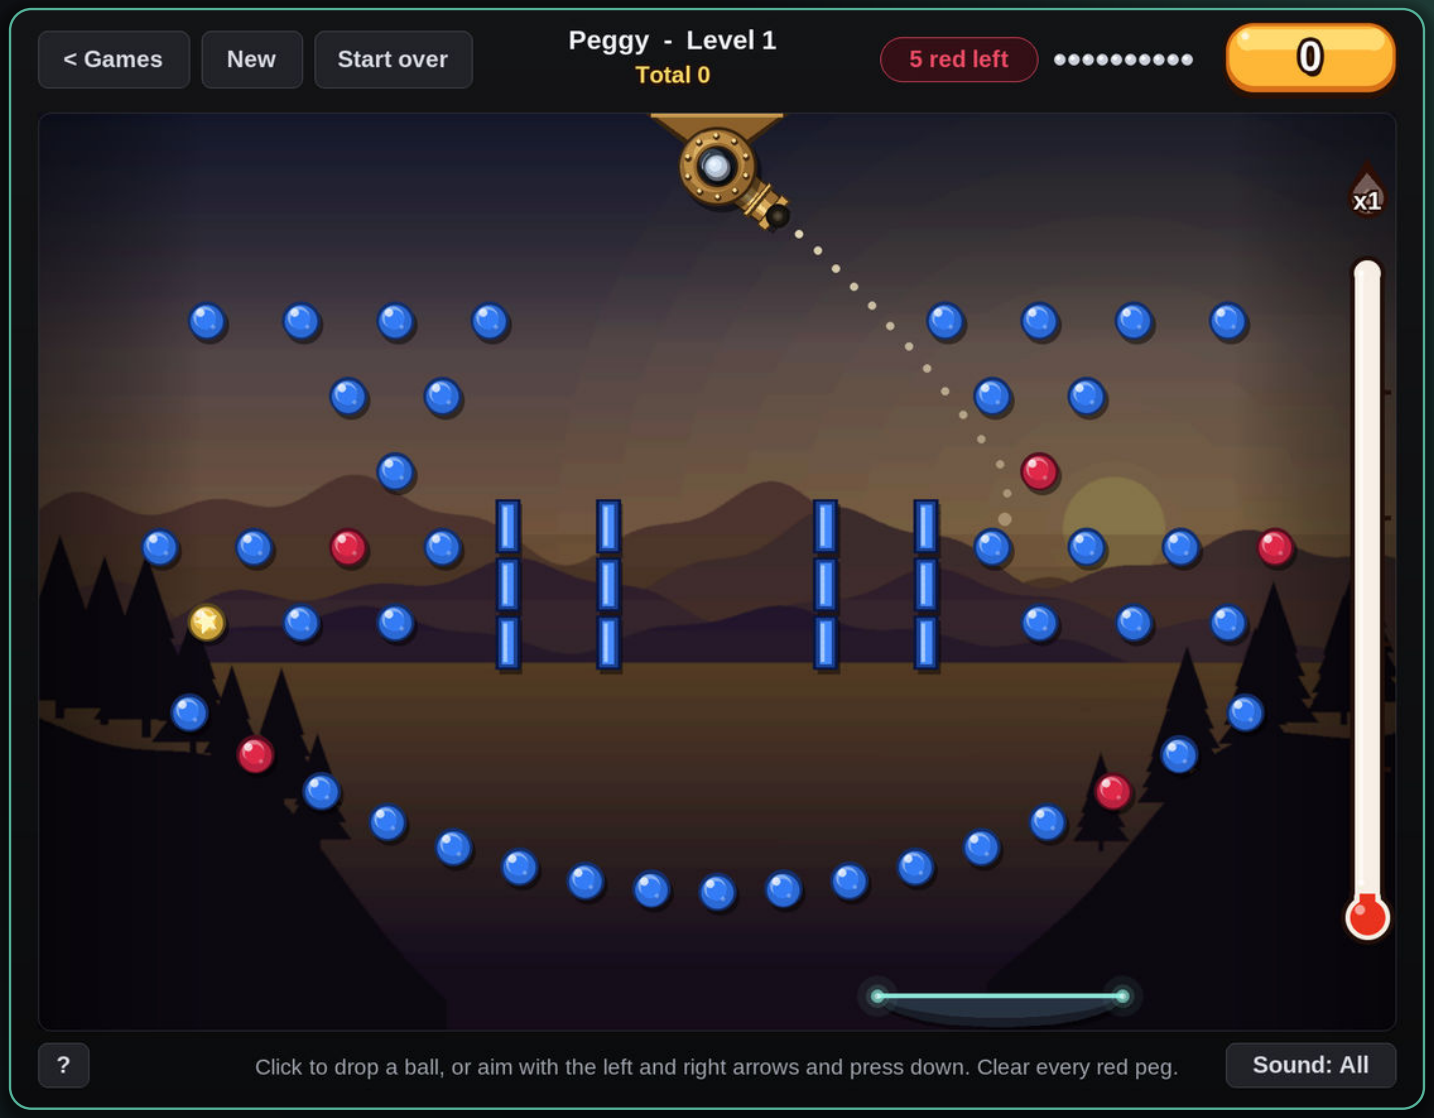

Peggy

Drop a ball. Clear the reds. Try not to cheer out loud.

Bounce through painted landscapes of pegs and curved bricks. You get ten balls to clear every red peg. Long chains climb the scale, Heat multiplies your points, and the last red peg gets the slow-motion treatment it deserves.

CONTROLS

- Aim the launcher.
- Drop the ball.
- Aim from the keyboard. Hold **Shift** for fine aim.
- ▼ or Enter — Drop the ball. **Enter** also moves on to the next level.
- New — Deal a fresh board at this level.

Gold is your friend

A gold peg splits the ball, up to four at once. Two balls find reds twice as fast.

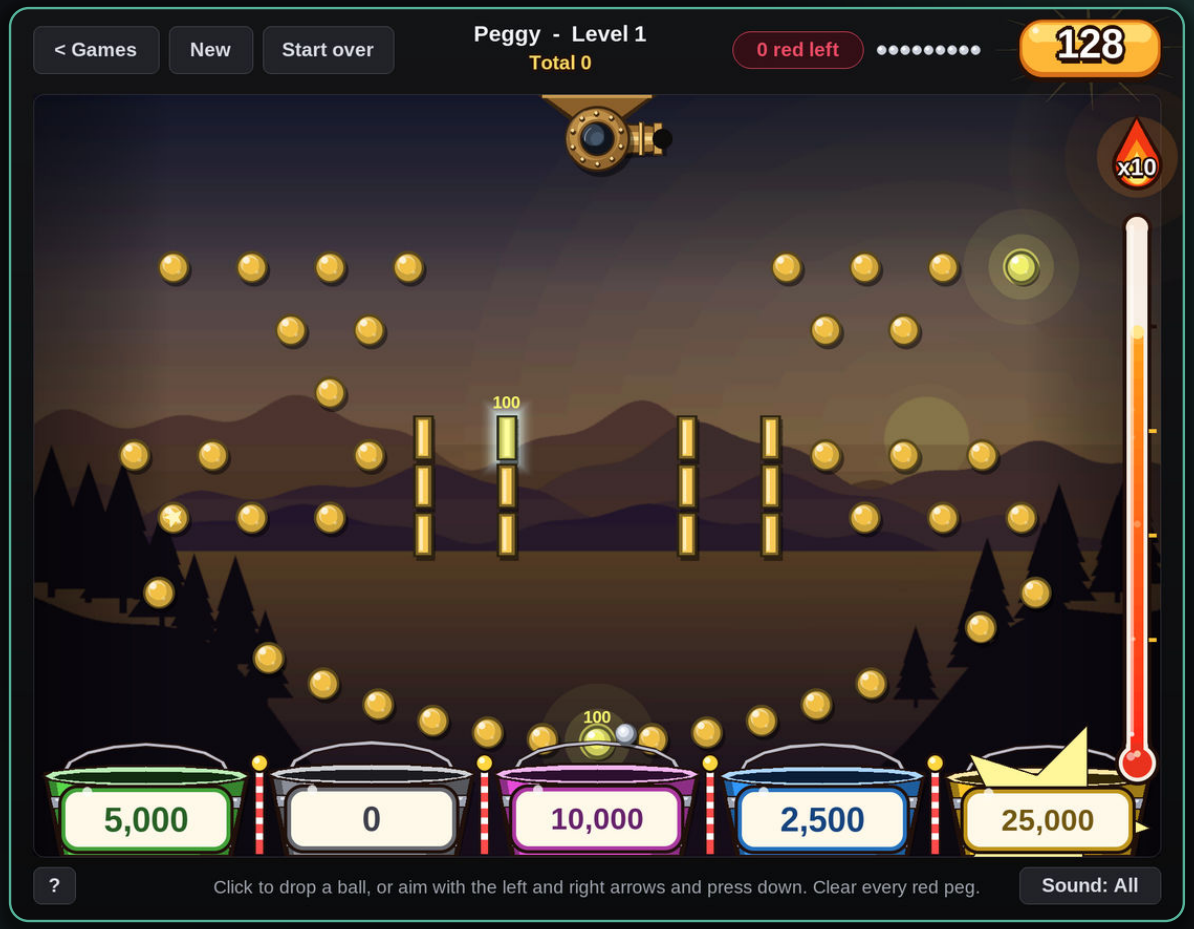

Mind the catcher

Land in the tray sliding along the bottom and the ball comes straight back.

Think in bounces

Reds can hide behind other pegs. Sometimes the best shot is the one that bounces twice first.

Know your pegs.

WHAT YOU ARE HITTING

Blue
10 points. The everyday peg, as a ball or a brick.

Red
100 points. Clear every one to win the level.

Gold
50 points, and it splits the ball. Up to four at once.

Bumper
From level 14. Never clears, always kicks.

HEAT

Every red you clear heats the gauge on the right. Your points climb in four steps, and every peg counts, not just the reds.

x2	x3	x5	x10

THE LAST RED PEG

Time slows down. Then every peg left on the board turns gold, worth **ten times** as much for the rest of that shot, and the catcher gives way to five buckets. One of them is empty. One of them is the jackpot.

0	2,500	5,000	10,000	25,000

BEYOND LEVEL 10

11
Pegs that spin and slide

13
Red pegs tucked behind others

14
Teal bumpers join in

17
A restless catcher

20+
A giant showpiece every 5 levels

Bubble and Squeak

Field mice are trapped in bubbles. Only you can pop them out.

Three or more of a colour pop, and anything left hanging falls, so a well-placed shot can bring down half the branch. Free every mouse before your shots run out and each one floats down on a dandelion seed to the mushroom house.

CONTROLS

- Aim. Hold **Shift** with the arrows for fine aim.
- Shoot. **Enter** works too.
- Swap to the next bubble. You can also click the acorn.
- Go on to the next level from the result card.

Fill the power jar

Popping fills it. When it is full your next shot is a bomb, a rainbow bubble that matches any colour, or a fireball that burns straight through.

Use the walls

Bubbles bounce off the side twigs. The aim guide shows the path, though it gets shorter on later levels.

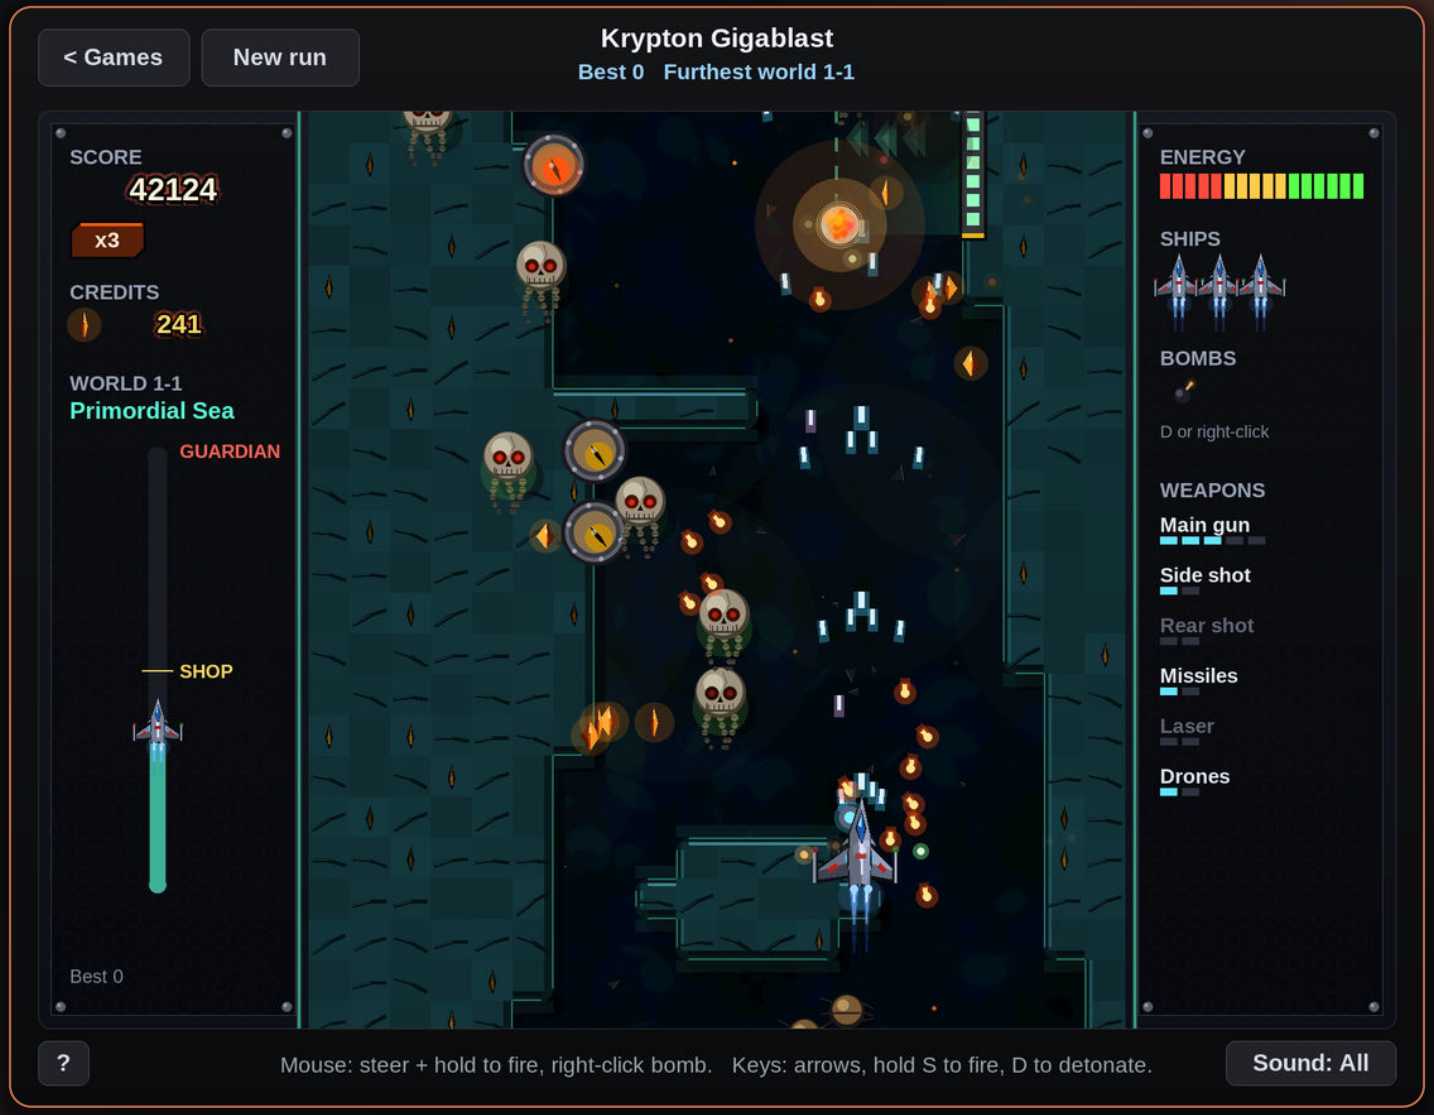

What comes later

Bombs from level 3, lightning from 4, stones that never pop from 5, and from level 8 the branch starts to sink.

Krypton Gigablast

Five alien worlds. Ten bosses. One very overworked ship.

A vertical shooter with a thrash metal soundtrack and no patience. Fight through living terrain, collect the credits your victims drop and spend them at the shop halfway through and at the end of every level. Each level ends with a boss.

CONTROLS

- Steer. The ship chases your cursor.
- Hold the left button to fire.
- Detonate a smart bomb.
- Steer from the keyboard.
- **S** — Hold to fire.
- **D** — Detonate a smart bomb.
- **Enter** — Leave the shop and continue from cards.

Walls are solid

Terrain blocks you but does not hurt on touch. Get pinned against the bottom of the screen, though, and it will crush you.

Find the chargers

Green wall chargers refill energy while you hover beside them. In boss fights, destroyed weak points drop green crystals instead.

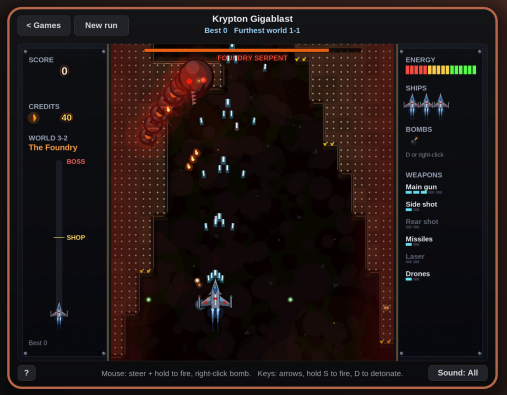

Keep the streak

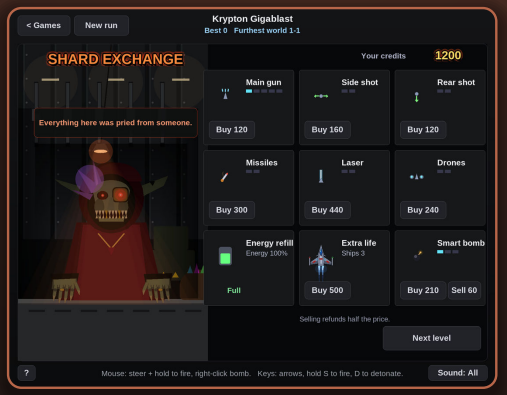

Your score multiplier climbs to x8 as you keep killing and resets the moment you take damage.

What is trying to kill you.

WORLD	ODD LEVEL	EVEN LEVEL	SHOPKEEPER	SHOP
1 Primordial Sea	Iron Warden	Brood Mother	Old Gill	The Bilge Locker
2 Crystal Caves	Prism Colossus	Crystal Reaper	Glint	Shard Exchange
3 The Foundry	The Crusher	Foundry Serpent	Rivet	Bits & Blasters
4 Spore Jungle	Venus Maw	Spore Mother	Madame Mycel	The Rot Bazaar
5 Magma Core	Molten Eye	Hive Mind	Cinder Jack	Hellfire Surplus

The shop

Main gun, Side shot, Rear shot, Missiles, Laser, Drones, Energy refill, Extra life and Smart bomb. Each upgrade costs more than the last, and selling refunds half the price.

New in each world

2: Splitters and Lancers. **3:** Shield drones and Rammers. **4:** Creepers and Spore pods. **5:** Phoenixes and Lava bombers.

Every bomb counts

A smart bomb wipes everything on screen, shockwave and all. You can only carry a few.

Losing a ship hurts

A lost ship costs you weapon levels as well as a life, so a good run is worth protecting.

Beat the Hive Mind

It waits at the end of world five. Beat it and the game loops around, harder than before.

Hold Your Horses

The whole British racing year, from Ascot to Aintree.

Run a yard through real fixture lists, or just have a flutter. Flat and National Hunt on 59 real courses, with going, weather, abandoned meetings, fallers at the fences and photo finishes. The 2:50 at Doncaster is waiting.

CONTROLS

This one is mouse only. Every screen has a line at the bottom saying what it does.

Career — Run a yard. Buy, train, enter, win.

Random day — Bet every race on one day with a fresh 500 pounds.

One-off race — A single race with a fresh bank.

Dates: Random — Toggle between random dates and today's real fixtures.

Real fixtures

The calendar follows the published 2026 and 2027 fixture lists. Set Dates to Today and bet on what is really being run.

Read the going

Weather changes daily and some horses handle soft ground better than others. Meetings can be abandoned.

Ride it yourself

In your career, switch Jockey rides to You ride in the paddock and take the reins. See page 19.

Running a yard.

Calendar

Each dot is a meeting. Click a day, then a course, to see its card. Click a race for the entries. Enter any time before the day. On the day you can go racing.

Sales

New lots every month. You see the published mark. How good a horse can get is your gamble. Press Bid and hold your nerve.

Stable

Click a horse to set its training: **Rest**, **Light**, **Normal**, **Hard** or **School** for the jumpers. Each horse costs about 48 pounds a day to keep.

Records

Your wins, prize money and the top-rated horses in training. Pick your racing colours with Main colour and Second colour.

ENTERING A RACE

< Jockey	Choose from 100 jockeys. Better ones cost more.
Mid-pack	Tactics: Front-run, Prominent, Mid-pack or Hold up.
Enter	Enter the race. **Withdraw** takes you back out.

GETTING AROUND

Next race	Jump to the next race on the card.
My next runner	Jump to your next entry.
Next day	Move the calendar on by a day.

They're off.

IN THE PADDOCK

Click a horse in the list to back it.

100 500 — Set your stake, from 10 to 2,500.

Win Each way — Choose your bet, then press **Place**.

Follow selected horse — Keep your eye on one runner.

Go to the start — Off you go.

WATCHING THE RACE

x1 x2 x4 — Race speed.

Field Pack Close — Camera: the whole field, the leading pack, or right up close.

Click a name in the running order to follow it.

Result — Skip to the result. **Stop** abandons the race.

Riding it yourself

Move up and down to change lane.

Hold to push. Watch your Energy bar.

Whip. More than 7 costs you a 500 pound fine.

After the post

Whole race and **Last section** replay it. **Photo finish** shows the print on any race, and close finishes go to a photo automatically. **Next race** carries on and **The card** goes back to the day.

Over the jumps

Hurdles, plain fences, open ditches and water, plus Aintree's spruce, The Chair, Becher's Brook and the Canal Turn. Horses fall, jockeys get up, and a faller may need time off.

Hop to It

Hop as far as you can without getting squashed.

Ten worlds, eleven hoppers from the start, ten more to earn, and one eagle with very little patience. Dodge the traffic, ride the logs, and bring a friend: two can play side by side or fight it out on one screen.

CONTROLS

▲ ◀ ▼ ▶ or W A S D	Hop one tile. In two-player games Player 1 uses W A S D and Player 2 the arrows.
Mouse	Or click the way you want to go.
Enter	Hop again after a crash.
1 player	Cycle through 1 player, 2 players: split, 2 players: battle.
< >	Pick your world and hopper before you start.

Do not dawdle

Stand still too long or fall too far behind and the eagle circles, then drops. Moving sends it away.

Everything unlocked

All ten worlds and eleven hoppers are open from the start. This is a break, not a job.

Collect coins

Gather 40 coins in a world to unlock its bonus hopper. Dragon, Unicorn and Alien are among them.

Ten ways to get squashed.

	WORLD	ITS SPECIALITY
1	Meadow	The classic: traffic, trains, rivers
2	Dusty Dunes	Tumbleweeds
3	Frosty Fields	Ice that keeps you sliding
4	Neon City	Traffic lights
5	Jungle Jumble	Sinking lily pads
6	Sugar Rush	Conveyors
7	Magma Mile	Meteors
8	Moon Hop	Portals
9	Spooky Spinney	Ghosts
10	Rainbow Run	Vanishing logs

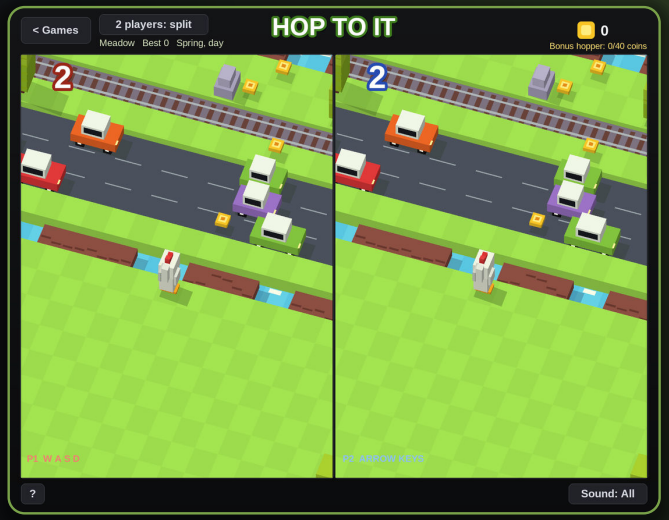

Hoppers

Ready from the start

Chicken · Cat · Penguin · Robot · Frog · Bunny · Pig · Panda · Cow · Duck · Sheep

Earned with 40 coins per world

Fox · Llama · Polar Bear · Raccoon · Monkey · Unicorn · Dragon · Alien · Ghost · Parrot

Two players, one keyboard

Split gives each player their own view of the same world. **Battle** puts you both on one screen with a shared camera: anyone left behind meets the eagle, and the first crash ends the round.

Seasons change

Every world cycles through a full day and all four seasons as you travel. The further you hop, the faster the screen pushes you along. Best scores are kept per world.

Flop House

No-limit Texas Hold'em against a table of rogues.

Twelve characters across five venues, from Lucky Lou in the back room to Mr Grim in the vault. Every table is a sit-and-go with rising blinds. The cards are shuffled fairly and the opponents never see your hand, but they do learn how you play.

CONTROLS

FOLD CHECK BET — Play your hand.

Change the size of your raise.

Min 1/2 pot All in — Also **Pot**. Quick raise sizes.

READ — Spend a Read token to see how strong a hand really is.

Click a face to open that player's file.

Hands Rogues — Hand rankings, and everyone you have met.

Coach ON Normal — Advice on or off. Normal or Fast pacing.

Watch for tells

Whistles, winks, sweat, a glowing antenna. Every rogue gives something away, and some are more honest than others.

Read tokens

You get two per table and earn one more for every player you knock out, up to five.

Climb the ladder

Take every chip to win the table. Ten tables lead to Mr Grim, with tougher players and better rooms on the way.

Know who you are sitting with.

Lucky Lou
Calls with anything. Hates folding, loves a miracle.

Nana Flush
Waits for monster hands. If she bets, believe her.

Tex Holden
Loud, loose and fearless. Bluffs more than he admits.

Big Mo
Raises everything to scare you. Stand your ground.

Professor Odds
Sound, patient maths. Punishes loose calls.

Roxy Deuce
A born bluffer who loves a big show. Call her down.

Sister Agnes
Honest to a fault. She almost never bluffs.

R.U.S.T.Y.
Plays by the numbers, and his antenna gives him away.

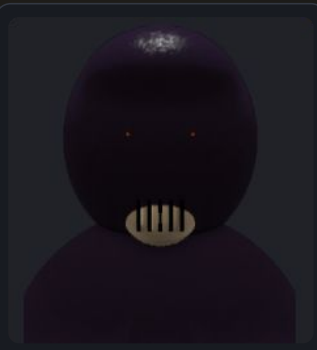

Pixel
Grew up playing online. Adapts to you fast.

The Baron
Absurdly rich, overbets for sport. Trap him.

Sal Mirage
A cold professional. Learns how you play.

Mr Grim
Patient, merciless, and always collects in the end.

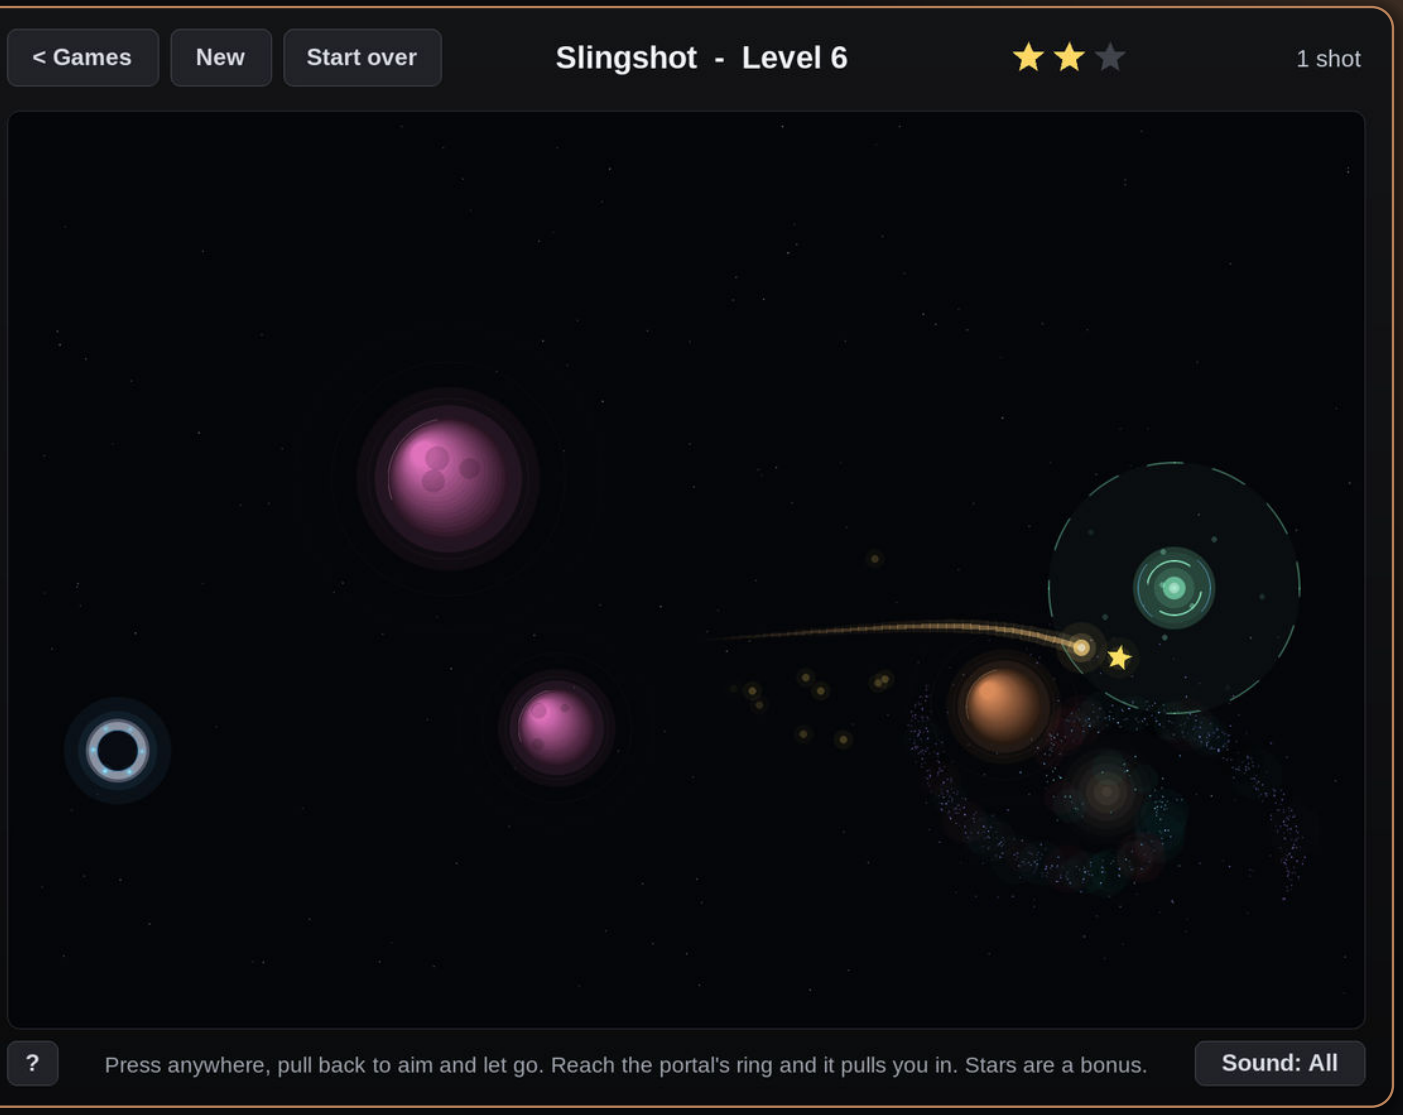

Slingshot

Fling your probe round the planets and into the portal.

Every level is solvable, and gravity does the hard part. Pull back, let go and watch the path bend around the planets. Get inside the portal's swirling ring and it pulls you in. Hit a planet, leave the board or get stuck in orbit and that shot is gone.

CONTROLS

	Press anywhere, drag back to aim and set the power, then let go to launch.
New	Generate a fresh level.
Start over	Back to level 1. Asks you to confirm.

Learn from the ghost

A faint ghost shows your last shot, so you can adjust a little each time.

Three stars

Collect all three stars on the way for a perfect shot. They are a bonus, not a requirement.

Later on

The aim guide and the portal's pull both shrink as you go, and from level 8 pulsars push you away.

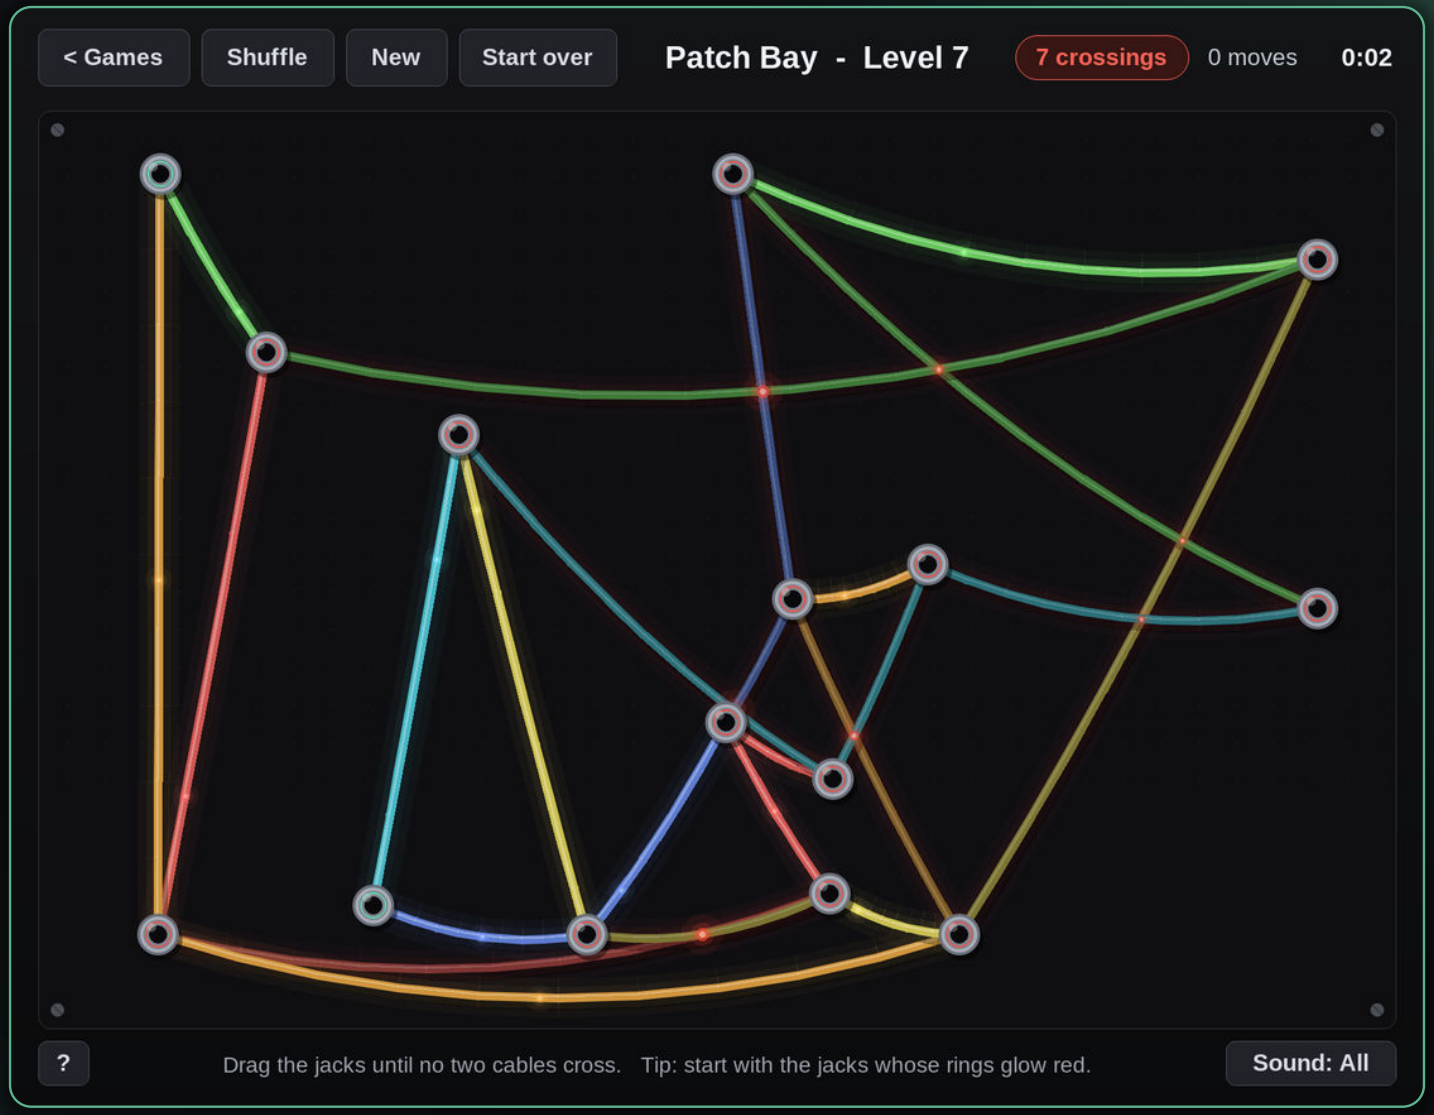

Patch Bay

A tangle of glowing cables. No two may cross.

Grab any jack and move it, and its cables follow. Level 1 starts with one crossing, level 2 with two, and so on, with more jacks as you go. Every cable sags under its own weight, so a clean layout has to allow for the curves.

CONTROLS

	Drag a jack to a new position.
Shuffle	Scramble the jacks when you are stuck.
New	Deal a fresh tangle of the same size.
Start over	Back to level 1. Asks you to confirm.

Follow the red

A jack with a red ring has a cable crossing another one. Start with those.

Work outwards

Pull the most connected jacks to open space first, then tuck the simple ones around them.

Allow for sag

Crossings are counted on the curves, not on straight lines between jacks.

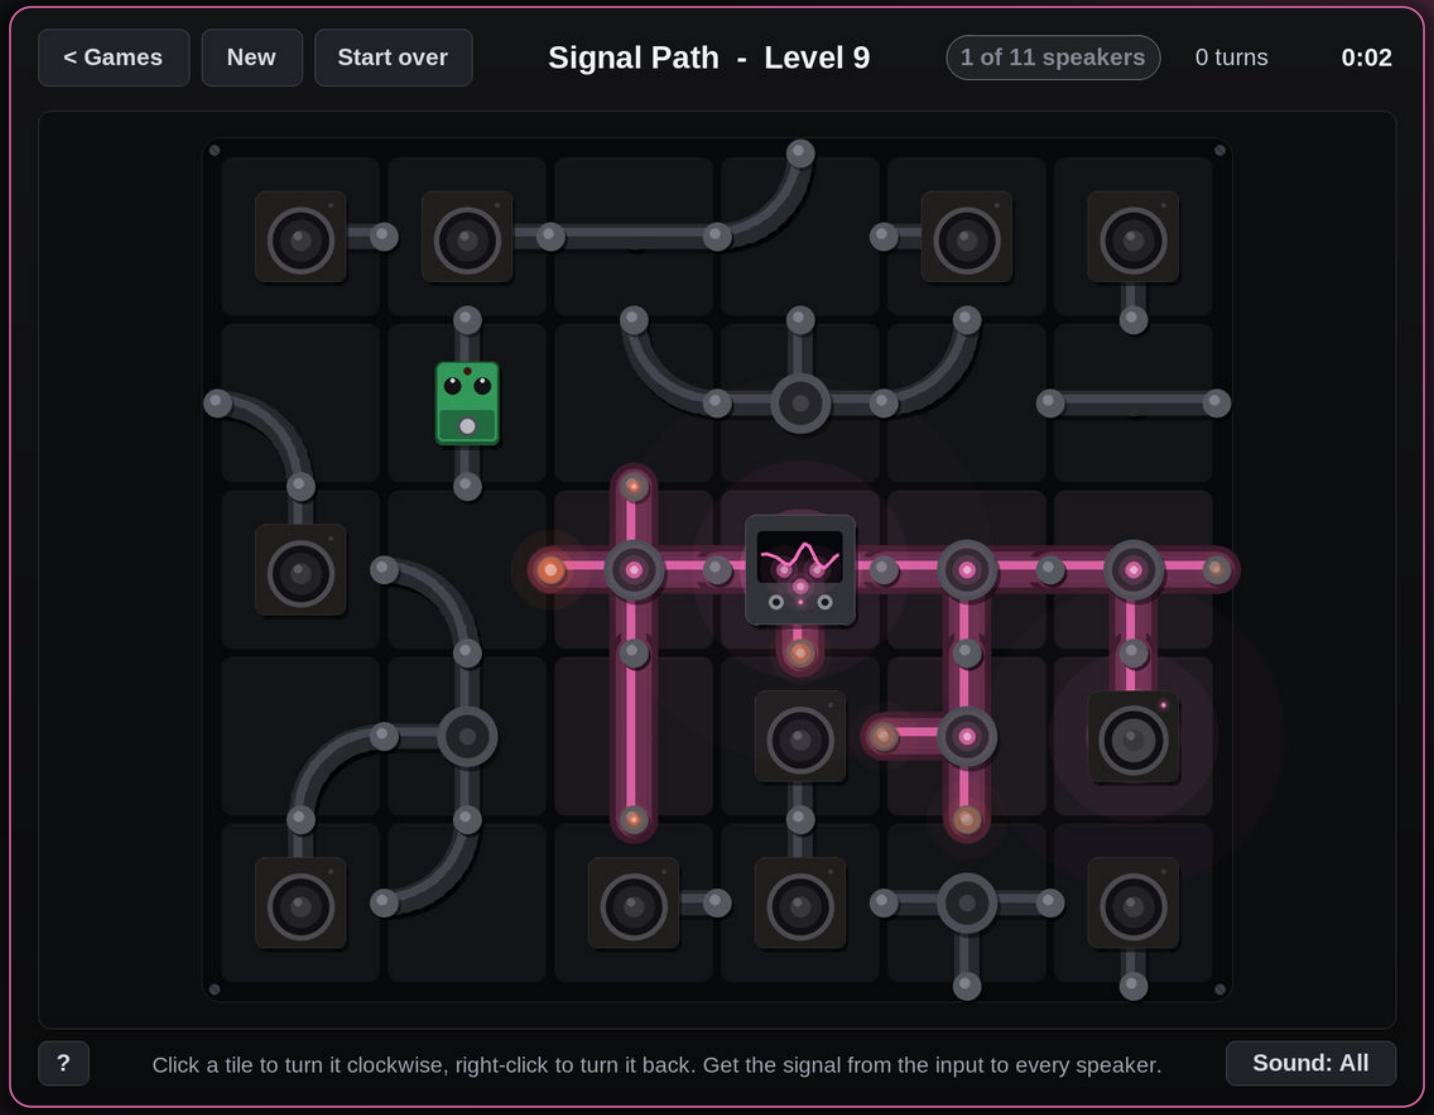

Signal Path

Turn the tiles to send the signal to every speaker.

A grid of cables, pedals and splitters stands between the audio input and a room full of speakers. Everything connected to the input lights up. Route it to every speaker with no loose ends to clear the level. The grid grows gently as you go.

CONTROLS

- Turn a tile clockwise.
- Turn it back.
- **New** — Deal a fresh board.
- **Start over** — Back to level 1. Asks you to confirm.

Beat the par

Solve it within the par number of turns for a perfect routing.

Corners first

Tiles at the edge have the fewest legal positions, so solve inward from there.

Speakers are ends

Every speaker is a dead end, so it can only be fed from one side. Let those guide you.

Mute Point

Every channel is muted. Every button is a trap.

Clicking a mute button flips it and the buttons directly above, below and beside it. Unmute everything to bring all the channels live. Every board has a true minimum number of presses, and the desk grows from three channels to eight as you go.

CONTROLS

- Flip a button and its neighbours.
- **Hint** — Light up a button worth pressing.
- **New** — Deal a fresh desk.
- **Start over** — Back to level 1. Asks you to confirm.

Chase the lights

Clear the top row, then press under anything still lit to push the problem down the desk.

Fix the bottom

What is left on the bottom row tells you which top-row buttons to press before chasing down again.

A perfect mix

Match par without using a hint for a perfect mix. The presses can go in any order.

REFERENCE

Controls at a glance.

GAME	MOUSE	KEYBOARD
Koi Pond	Left-click: feed. Right-click or right-drag: ripples	Mouse only
Pixel Garden	Choose a tool, click a tile. Hover for details	Mouse only
Firefly Shepherd	Move: lead. Hold: call them closer	Mouse only
Rain Window	Drag: wipe the mist, or draw	Mouse only
Kintsugi	Drag the shards into place	Mouse only
Peggy	Move: aim. Click: drop	Left / Right aim (Shift = fine). Down or Enter drops
Bubble and Squeak	Move: aim. Click: shoot. Right-click or acorn: swap	Left / Right aim (Shift = fine). Up or Enter shoots. Down swaps
Krypton Gigablast	Move: steer. Hold: fire. Right-click: smart bomb	Arrows steer. Hold S to fire. D bombs. Enter continues
Hold Your Horses	Buttons. Riding: up/down lane, hold push, right-click whip	Mouse only
Hop to It	Click the way you want to hop	Arrows or WASD hop. Two players: P1 WASD, P2 arrows. Enter restarts
Flop House	Buttons. Wheel: raise size. Click a face: player file	Mouse only
Slingshot	Press, drag back, let go	Mouse only
Patch Bay	Drag the jacks	Mouse only
Signal Path	Click: clockwise. Right-click: anticlockwise	Mouse only
Mute Point	Click a button to flip it and its neighbours	Mouse only

In every game: P pauses / the ? button shows the help card / Sound cycles All, FX and Off / < Games returns home

TROUBLESHOOTING

If something seems off.

I can hear effects but no music

Check the Sound button says **All**, not **FX**. If it does, make sure the .opus files are in **Dependencies/BreakRoom**. The music is optional: without those files the games carry on with effects only. Hold Your Horses has race sounds but no music by design.

There is no sound at all

Game sound only plays while the transport is stopped or paused. Press stop, and check that Sound is not set to **Off**. Some of the quieter games play music only.

The keyboard does nothing

Click inside the Break Room window first so that it has focus. If REAPER still grabs the keys, turn on **Send all keyboard input to plug-in** in the FX window. Every keyboard game can also be played with the mouse.

My progress vanished

Progress is stored with the plugin in your REAPER project, so save the project. A new copy of Break Room on another track starts fresh, and **Start over** or **Reset this game** really do clear things.

The Flop House takes a moment to open

The room and all the characters are raytraced in JSFX when you sit down at a table. A progress screen shows how it is going. It only takes a few seconds.

Will this end up in my mix?

No. Your audio passes through untouched and game sound never plays while the transport is running, so it cannot reach a render or a recording.

Does it use CPU when I am not playing?

Close the window and the drawing stops and the music fades away. To be completely sure, bypass the plugin or take it off the track before a big render.

The window is the wrong size

Drag the edge of the FX window. Everything scales with it, and the layout stays pinned to the top of the window.
